

High Performance Chains

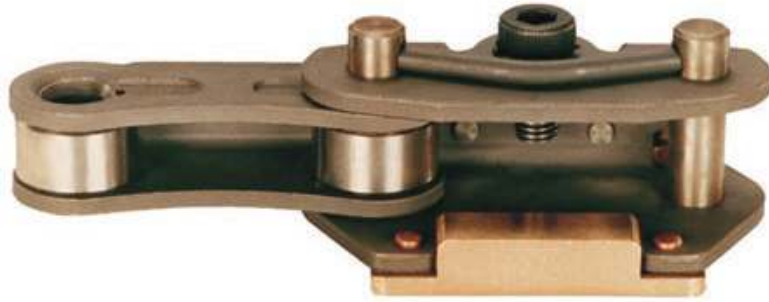

# STENTER CHAINS

*“For a Superior Stretch”*

# STENTER CHAINS

Specially designed chain with sintered liners ensures highest possible stretch, high operational speed with minimum/optimum energy consumptions.

TIDC Chains are suitable for

Artos Stenter machines

Harish Stenter machines

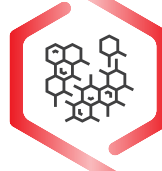

Chains are interchangeable to existing chains used in the Machine. However it is advisable to replace the entire chains upon elongation for better performance of chains and system.

Chains can be used from single chamber to 7 Chamber Machines

Chains are specially designed for superior performance at speed of 100 - 130 MPM

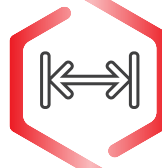

Chain links made of superior grade steel with higher tensile strength

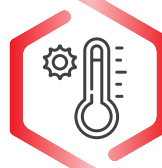

Sintered bronze liners

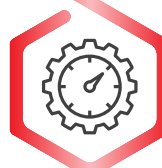

Hardened Pins and Bushes for improved wear resistance

Closer pitch control for maintaining uniform chain width

Suitable for operating at higher temperatures – up to 250 degrees celcius

Superior wear life at higher operating speeds
